Press release

“Vigorous approaches to chemicals’ safety and sustainability will drive company and brand differentiation,” says Sue Bullock, TSG Consulting

A new tide of regulation coupled with public expectation for safe and sustainable chemicals and products will create both substantial opportunities and new risks for industry, according to an expert at [TSG Consulting](#).

Sue Bullock joined the consultancy earlier this year to lead the chemical compliance, stewardship and sustainability team. She notes the focus on ‘safer’ products has been sharpening since the EU introduced ground-breaking chemicals regulations in 2006. As the pace of change is set to quicken, brands that prepare well are best placed to prosper.

Companies already rely on growing teams of experts to make sure their products can be used safely and in accordance with legislation, whether they manufacture and sell feedstocks, pesticides or consumer goods. However, Sue believes a different mindset and smarter toolbox are needed to successfully address the ambitious requirements for product safety and sustainability expected under the EU Green Deal and similar initiatives around the world.

“When people think about sustainability, carbon reduction is often the first thing that comes to mind, but product composition is at the crux of this issue,” explains Sue. “Choices about the chemicals and materials used in products determine their impact on health and the environment, their performance and, ultimately, their marketability. Options need to be thoroughly assessed, and decisions – including uncertainties and tensions – must be explained effectively and credibly.”

In her new role, Sue also helps drive [Science Group Sustainability](#), a platform which combines TSG’s expertise with that of sister companies [Sagentia Innovation](#) and [Leatherhead Food Research](#). It was established by parent company [Science Group](#) to blend product innovation and regulatory compliance services to help industry tackle complex sustainability matters.

Sue says businesses benefit from a strategic, pragmatic approach to prioritise concerns relating to chemical use then make informed decisions to realise greatest net benefit to the planet and business resilience.

“Most businesses have sustainability commitments in place, and now they need to set about achieving them. This is where things start to get difficult. When you lift the hood on any individual chemical or product, you’re often faced with a highly complex set of issues. Expertise is needed to evaluate options, which could mean moving to a safer alternative, or preparing evidence to demonstrate the relative impact on human health and the environment of one chemical over others.”

Increasingly, this involves work deep within companies and their value chains, helping to effectively communicate progress to stakeholders, from investors to customers. It’s about futureproofing ‘safe and sustainable’ products and ensuring they have a robust evidence base to support sustainability claims and reporting.

“Understanding, then acting on, sustainability issues related to chemical ingredients requires deep technical expertise,” Sue continues. “Everything is interconnected, and much of the time there are trade-offs and compromises to be made. This in turn can reveal opportunities for meaningful improvement and sustainability-led innovation. When you combine scientific insight, regulatory understanding and innovation best practice it’s possible to make significant gains. [TSG](#) has the technical and regulatory expertise to help companies manage day-to-day commitments and deliver safer, more sustainable products. Combining this with the innovation and sector expertise of [Sagentia Innovation](#) and [Leatherhead Food Research](#) via [Science Group Sustainability](#) is unique and truly exciting.”

TSG works with manufacturers and distributors across sectors including chemicals, pharmaceuticals, manufacturing, food and beverage, plant protection, hygiene and cosmetics. For more information, visit www.tsgconsulting.com/sustainability-services

About TSG Consulting

TSG provides companies with high-quality regulatory and scientific consulting services. We help clients worldwide address the technical and regulatory issues in taking their products to market in multiple jurisdictions. Our scientific expertise, regulatory knowledge and understanding of local nuances enable our clients to navigate the complex and ever-changing regulatory landscape across the globe.

We serve a number of key markets and industry sectors including agricultural, industrial, consumer, food and beverage, animal health, and medical. Our teams comprise scientists and regulatory experts – many of whom have previously held positions at regulatory agencies, departments and in industry. This combination of science, regulatory expertise and knowledge of how institutions and industry operate provides our clients with superior and well-rounded guidance.

TSG Consulting is a Science Group company.

About Science Group

Science Group plc (AIM:SAG) is a science-led advisory and product development organization. The Group has three divisions:

- R&D Consultancy: providing advisory, applied science and product development services cross-sector helping clients derive maximum return on their R&D investments.
- Regulatory & Compliance: helping clients in highly regulated markets to launch, market and defend products internationally, navigating the frequently complex and fragmented regulatory ecosystems.
- Frontier Smart Technologies: market leader in the design and manufacture of chips and modules for the DAB/DAB+ radio and connected audio markets

With more than 400 employees worldwide, primarily scientists and engineers, and speaking more than 30 languages collectively, the Group has R&D centres in Cambridge and Epsom with more than ten additional offices in Europe, Asia and North America.
